Attn: Mr. Larry Lucas

Dear Mr. Lucas:

As per your telephone conversation with Joe Harrell of Harrell Oil Co today, I am sending you the basic information on preparations we have followed for closing the three underground storage tanks on our property. Same listed as follows:

1. enclosed is a base map showing the streets, building, location and size of underground storage tanks and location of samples taken.
2. We are closing two 3,000 gal. tanks and one 10,000 gallon tank, all of which were used to store gasoline. The sample marked 1A and 1B were taken at each end of the 10,000 gal. tank at a depth of 12 feet and is sample #69552 on the report of Research and Analytical Laboratories. The sample marked 2A and 2B were taken at the ends of the two 3,000 gal. tanks which are side by side and taken at a depth of 9 feet. This is marked sample #69551 on the report.
3. All samples were taken at the bottom of the holes by auger. The auger was washed with soap and water between samples. The samples were stored in clean, glass mason jars and transported immediately to the lab. I carried the samples myself.
4. Enclosed are copies of the two reports for samples 69551 and 69552 and also a map showing the exact location the samples were taken on our property. Also enclosed is a copy of your letter and notification of tank closure.
5. We confirmed by phone to Jackie Firebaugh of the lab that EPA method 5030 was used to test the samples.
6. The samples showed no contamination was present and please advise us if we can proceed with filling the tanks with flowable fill mix 1, of 50 lbs. cement, 300 lbs. fly ash, 458 lbs. water and 2,850 lbs. sand.

Thank you for your co-operation.

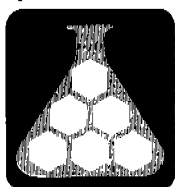

Sincerely,

PARRISH TIRE COMPANY

*Charles E. Goad*
